VI TECHNICAL DATA 118-125

3-JAW SELF-CENTERING SET-TRU CHUCKS

- T.I.R. REPEATABILITY 0.0006"
- FORGED STEEL BODY

- 1
- 2
- 3
- 4
- 5

3564

Standard accessories

1 Set of hard solid ID jaws

1 Set of hard solid OD jaws

1 Wrench + 1 Hex key

- Hardened and ground working surfaces
- Balanced scroll plate
- Repeatability: 0.0006"
- Fine adjustment radially set screws provide nearly 0 run-out
- The clamped workpiece is adjusted to the required concentricity by means of 4 (8 for sizes 16", 20" and 25") radially arranged adjusting screws
- Made for universal use, but particularly advantageous for grinding machines, indexing heads and lathes
- Mounted on the machine tool spindle from the front of the chuck by using an adapter plate

- 5

- 5C collet chucks
- Direct threaded mount
- The wrench operated scroll provides for uniform and distortion free clamping of workpieces while simultaneously allowing for a fast collet exchange
- Designed for use with 5C collets (385E) and can be used for turning, facing, boring, grinding and milling operations
- Collet 5C not included

WORKPIECE STOPS

- Workpiece stop for all chucks
- The stop can be fixed on the chuck body with three magnets, which are incorporated in the stop
- The workpiece stop is for machining short parts and provides a constant, perfectly concentricity of the workpiece
- Made of treated aluminium
- Available separately or in a set of 5 pieces

**BISON IS CONSTANTLY ENGAGED IN MANUFACTURING
OUR FAMOUS HIGH QUALITY CHUCK JAWS -
ACCOMPLISHED FOR DECADES AND VALUED
FOR THEIR QUALITY.**

- We offer the chuck jaws for most lathe chucks around the world
- BISON chuck jaws are made of high quality steel and aluminum
- Our offer includes jaws with both tongue and groove
- The ground serration additionally effects on the clamping stability and quality of the workpiece surface
- In addition to the standard programme, we offer our customers complete solutions dedicated to specific applications.

**OUR ULTIMATE GOAL IS TO CONTINUE TO REMAIN
A WORLDWILDE LEADER IN PROVIDING RECISION
MACHINING SOLUTIONS BY OFFERING BEST
PRICE/ QUALITY FACTOR!**

MAXIMUM PERMISSIBLE ROTATION SPEEDS (RPM)

Admissible revolutions of the chuck depend on many factors, such as cutting parameters, weight of the workpiece and its balance or type of machining (interrupted or continuous turning) etc.

The max. speeds as indicated in the table below should not cause a decrease of the clamping force to the half of its initial value. When machining in the stable conditions (machining material, tools, working conditions), the clamping force may be reduced by up to 67% of its initial value.

This relates to the chuck equipped with standard jaws, that do not protrude beyond the outer diameter of the chuck and the unbalance condition of the 'chuck-machining workpiece' is maintained (not exceeding 20gmm/kg). The chuck and jaws must be in good condition. Otherwise, refer to the calculations as indicated in the PN-M-60650.

SPINDLE NOSE CENTERING ACCURACY

To obtain the specified centering accuracy of a chuck mounted on a machine tool it is necessary:

- 1) to ensure the machine spindle nose run-out does not exceed the values specified,
- 2) to meet the basic requirements for correct mounting of the chuck on the spindle nose, according to the operations manual.

TOTAL GRIPPING FORCE

- The gripping force is the total sum of all jaws acting radially on the stationary, nonrotating workpiece.
- The data refer to a chuck in good condition lubricated with grease as recommended in the chuck manual.
